

AI Post and Product Translator

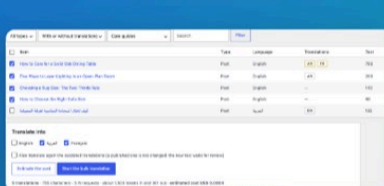

A guide to AI Post and Product Translator: connecting your AI account, languages and glossary, translating one item or many, the side-by-side review, outdated translations, WooCommerce products, the switcher and hreflang links, WPML and Polylang, and the cost.

1. Start here

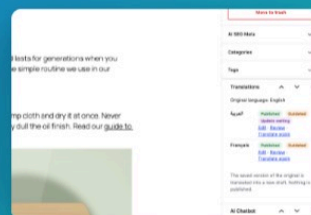

In plain words: AI Post and Product Translator translates a post, a page or a WooCommerce product into another language with your own AI account and saves the result as a **linked draft**: a new post in the target language, connected to its original. Block markup, links, shortcodes and your brand names are protected by placeholders and checked after the translation; a broken answer is refused and nothing is saved. You review the draft side by side with the original and publish it yourself.

Review side by side

Bulk with a cost estimate

Translate from the edit screen

Side-by-side review, bulk translation with a cost estimate, and the Translations box on the edit screen.

Tip: It does not need WPML, Polylang or TranslatePress: the links between translations are kept in post meta. If WPML or Polylang is active, see the chapter about them.

2. What you get

Feature	What it does
Linked drafts	Each translation is a new draft linked to the original by a group id and a language. Nothing is ever published by the plugin.
What is translated	Title, content, excerpt (the short description of a product), SEO title and description of Yoast SEO, Rank Math, SEOPress and AI SEO Meta Generator, custom product attributes, and (switches) alt, title, aria-label and placeholder attributes.
Block-safe	Only text is sent; block comments, JSON, links, shortcodes and code stay as they are. Placeholders keep inline formatting.
Glossary and do-not-translate list	Your term translations are always applied; brand names, SKUs, codes, URLs and e-mail addresses are never translated.
Validation	Every answer is checked: same placeholders once each, no new markup, links or shortcodes, and the same block structure, links and tags as the original. Otherwise it is refused.
Outdated detection	When the original changes, its translations are marked outdated. One click translates again; a published translation is not changed, the new text waits for your review.
Bulk translation	Choose items and languages, see a cost estimate, start: a background run with progress, pause, resume and cancel.
Side-by-side review	Original and translation next to each other, every field, right to left where needed.
On the site	Language switcher (block, shortcode, widget), hreflang alternate links with x-default, and the lang attribute of translated pages.
Per language	Name, locale, direction, formality, tone and the slug policy (transliterate, translated title, or original slug + code).
Products	WooCommerce duplicate of the product (price, images, variations), translated texts and custom attributes, categories mapped to their translations.

Arabic

Arabic as a source and as a target, right to left screens, the plugin translated into Arabic.

3. Requirements

Item	Details
WordPress	6.0 or newer
PHP	7.4 or newer
Also	Optional: WooCommerce 8.0+ for products; Yoast SEO, Rank Math, SEOPress or AI SEO Meta Generator for SEO fields
An AI provider	An account and an API key with an OpenAI-compatible service (OpenAI, OpenRouter, Azure, a local server such as Ollama...) or with Anthropic. You pay your provider for what you use; the plugin has no usage fees.
License	GPL-2.0-or-later

4. Install

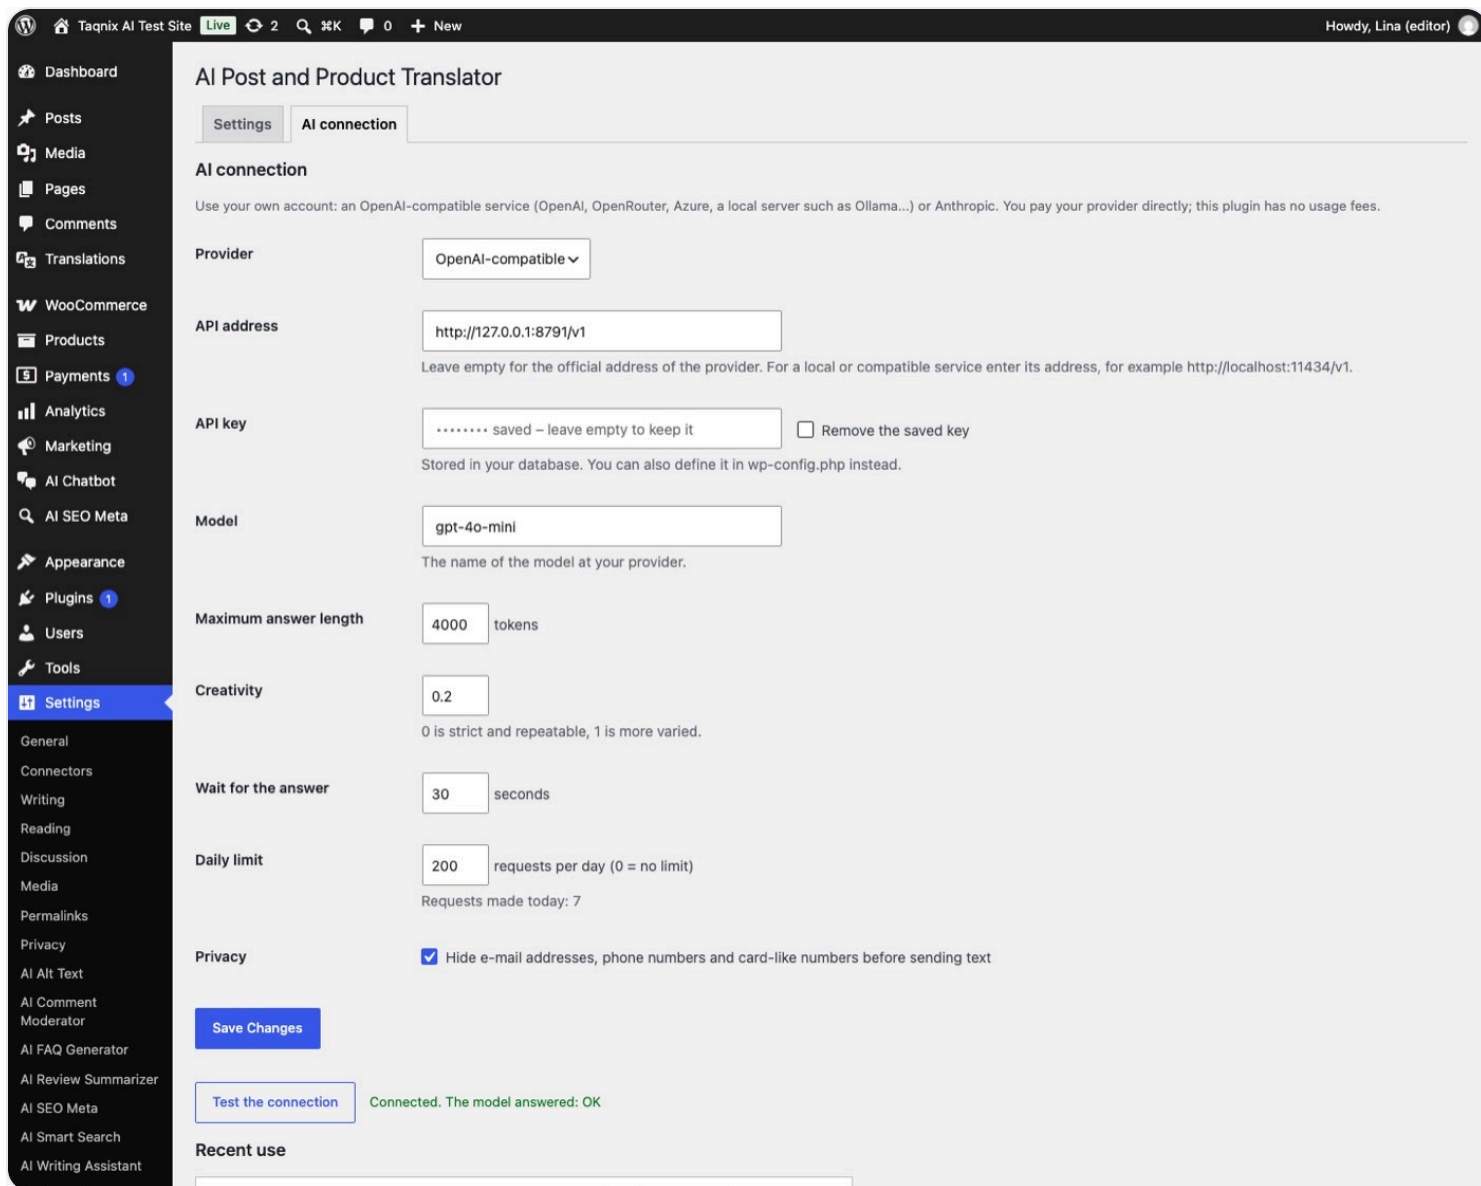

- 1 Unzip the package you downloaded. Inside is `ai-post-and-product-translator.zip` (do not unzip this one).
- 2 In WordPress open **Plugins → Add New Plugin → Upload Plugin**, choose `ai-post-and-product-translator.zip` and press **Install Now**.
- 3 Press **Activate Plugin**.
- 4 Open **Settings → AI Translator → AI connection**, choose your provider, paste your API key and press **Test the connection**.

5. Connect your AI

In plain words: The plugin works with **your own** AI account. In **Settings → (this plugin) → AI connection** choose the provider, paste the key and press **Test the connection**: a green message tells you that the model answered.

Field	Meaning
Provider	OpenAI-compatible (OpenAI, OpenRouter, Azure, Groq, Ollama, LM Studio...) or Anthropic.
API address	Leave empty for the official address. For another service enter it, for example <code>http://localhost:11434/v1</code> .
API key	Stored in your database (never shown again). You can define it in <code>wp-config.php</code> instead and the field disappears.
Model	The model name at your provider. A small, cheap model is enough for most tasks.
Maximum answer length	Caps the tokens of one answer, so a request cannot cost more than you expect.
Daily limit	The number of requests the plugin may make per day (0 = no limit). When it is reached the plugin stops asking until tomorrow.
Privacy	Hides e-mail addresses, phone numbers and card-like numbers before the text is sent.

Tip: The table **Recent use** at the bottom of the tab shows the requests, the errors and the tokens of the last days.

The AI connection tab after a successful test.

Tip: The daily limit of this plugin is 200 requests by default (not unlimited). One item is one request per 5,000 characters of text, so a long article can need several.

6. Languages and glossary

In plain words: Translations → Languages and glossary. English, Arabic and French are there at the start; add or remove languages in the table. The **code** is used in the hreflang links (en, ar,

fr, pt-BR). For every language you choose the direction, the formality, a tone and the slug of new translations.

Languages

The code is used in the hreflang links (en, ar, fr, pt-BR). With Polylang in API mode, use the same codes as Polylang. Empty a code to remove a language.

Code	Name	Locale	Direction	Formality	Tone	Slug of new translations
en	English	en_US	Left to right	Default	for example: warm, simple	Original slug + code
ar	العربية	ar	Right to left	Formal	for example: warm, simple	Transliterate the translated title
fr	Français	fr_FR	Left to right	Formal	for example: warm, simple	Translated title
			Left to right	Default	for example: warm, simple	Translated title
			Left to right	Default	for example: warm, simple	Translated title

Glossary

One rule per line: term = translation, or term = translation | language code. The term is replaced by a placeholder before the text is sent, and the placeholder becomes your translation, so the rule is always applied (the grammar around it is up to the AI).

free delivery = توصيل مجاني | ar
free delivery = livraison gratuite | fr
workshop = ورشة | ar

Do not translate

One word or phrase per line: brand names, product names, codes. They are kept exactly as written (the match is case sensitive). Links, e-mail addresses, shortcodes, HTML, the SKU of a product and, when enabled, codes such as AB-1200 are always kept.

Casa Nord
Ostra

Save Changes

Thank you for creating with WordPress.

Version 7.1.4

Option	Meaning
Formality	Default, formal (polite forms of address) or informal.
Tone	A few words added to the instructions, for example "warm, simple".
Slug of new translations	Transliterate the translated title into Latin letters (good for Arabic), use the translated title, or keep the original slug with the language code (oak-table-fr).
Glossary	One rule per line: <code>free delivery = توصيل مجاني ar</code> . Without " code" the rule is for every language. A capital at the start of a sentence is kept.
Do not translate	One word or phrase per line, case sensitive: brand names, product names.

Tip: The language of the original content is set in the settings (English by default). A single post can have another language: set it in its Translations box before it has translations.

7. Translate one item

In plain words: Open a post, a page or a product. The **Translations** box (in the sidebar of the block editor, at the side of the classic editor) lists the languages. Press **Translate**: the saved version of the original is translated and a draft is created. Then **Edit** or **Review** it.

Ostra Oak Dining Table → العربية Draft · [Edit the translation](#) · [Translate again](#)

	Original (English)	Translation (العربية)
Title	Ostra Oak Dining Table	طاولة طعام Ostra من البلوط
Content	A calm, solid oak table for six, made by hand in our workshop and finished with natural oil.	طاولة هادئة من البلوط الصلب لستة أشخاص، مصنوعة يدوياً في ورشتنا ومشطية بالزيت الطبيعي.
Excerpt / short description	Solid oak dining table for six, 180 x 90 cm, with free delivery.	طاولة طعام من البلوط الصلب لستة أشخاص، 180 x 90 سم، مع توصيل مجاني.
Attribute name	Material	الخامة
Attribute value	Solid oak	بلوط صلب
Attribute name	Finish	التشطيب
Attribute value	Natural oil	زيت طبيعي
Attribute value	Matt lacquer	ورنيش مطلقاً
Attribute name	Seats	عدد المقاعد
Attribute value	Six people	ستة أشخاص

Thank you for creating with [WordPress](#).

Version 7.1.4

A product: title, description, short description and attributes.

Tip:

Read the translation before you publish it, especially numbers, product facts and anything legal. The AI can be wrong.

9. When the original changes

In plain words:

Each translation keeps a fingerprint of the original. When the original is saved with other text, its translations are marked **Outdated** (in the box, the overview and the Languages column of the lists). **Translate again** updates a draft translation in place. A

published translation is never changed by the AI: the new text is kept as an **update waiting** and you apply it on the review screen with one click.

The screenshot shows the WordPress dashboard with the 'Posts' list. The interface includes a sidebar with navigation links like Dashboard, Posts, Media, and WooCommerce. The main area shows a list of posts with columns for Title, Author, Categories, Tags, Date, and Languages. The 'Languages' column shows buttons for EN, AR, and FR. The first post is 'Comment entretenir une table à manger en chêne massif' by admin, published on 2026/10/29 at 8:12 pm. The second post is 'How to Choose the Right Rug for Your Living Room' by admin, last modified on 2026/10/29 at 8:12 pm. The third post is 'خمسة طرق لتوزيع الإضاءة في غرفة مفتوحة' by admin, last modified on 2026/10/29 at 8:12 pm. The fourth post is 'كيف تعطي بطاولة طعام من خشب البلوط' by admin, published on 2026/10/29 at 8:12 pm.

The Languages column of the posts list (an outdated translation is marked).

10. Bulk translation

In plain words: **Translations → Bulk translation** lists the published originals. Filter by type, category or “not yet in” a language, tick items and languages and press **Estimate the cost**: you see the number of translations, characters, requests, tokens and an estimated cost from the prices in the settings. Then **Start**. The run continues in the background (WP-Cron), faster while the page is open; pause, resume or cancel it at any time. Items that already have an up-to-date translation are skipped; tick the box to translate again the outdated ones.

Version 7.1.4

A bulk run in progress.

Tip:

The run pauses by itself when the daily limit is reached or after five errors in a row, and tells you why.

11. What is protected and checked

Kept as it is	How
Block markup	Block comments with their JSON settings, every block-level tag and its attributes (class, style, id, data-*, dir), so the block editor opens the translation without "invalid block" messages.
Links and media	Every href, src and srcset stays byte for byte; link texts are translated, the addresses are not.
Inline formatting	Bold, italic, links and spans become paired placeholders such as <g1>...</g1>, so the AI can move them with the words but cannot drop or invent them.
Shortcodes, code, scripts	Shortcodes, <code>, <pre>, scripts, styles, SVG and embeds are never sent.
Your words	The do-not-translate list (brand and product names), the SKU of the product, product codes such as AB-1200 (switch), e-mail addresses, phone numbers, SEO variables such as %%sitename%%.
Your glossary	A glossary term is replaced by your translation of it, always.
Translated	Text between tags, heading texts, button and link labels, list items, and (switches) the alt, title, aria-label and placeholder attributes.

In plain words: After the translation, every piece of text is checked: each placeholder exactly once and correctly nested, no new HTML, links, block comments or shortcodes, no empty or runaway text. Broken pieces are sent once more; if they are still broken the whole translation is refused with the reason and **nothing is saved**. Then the rebuilt text is compared with the original: same block delimiters and settings, same tags, same links and sources, same shortcodes, same dir attributes.

Important: Text stored inside the JSON settings of a block (a few blocks keep a label there) is not translated: it stays as in the original. Check such blocks in the review.

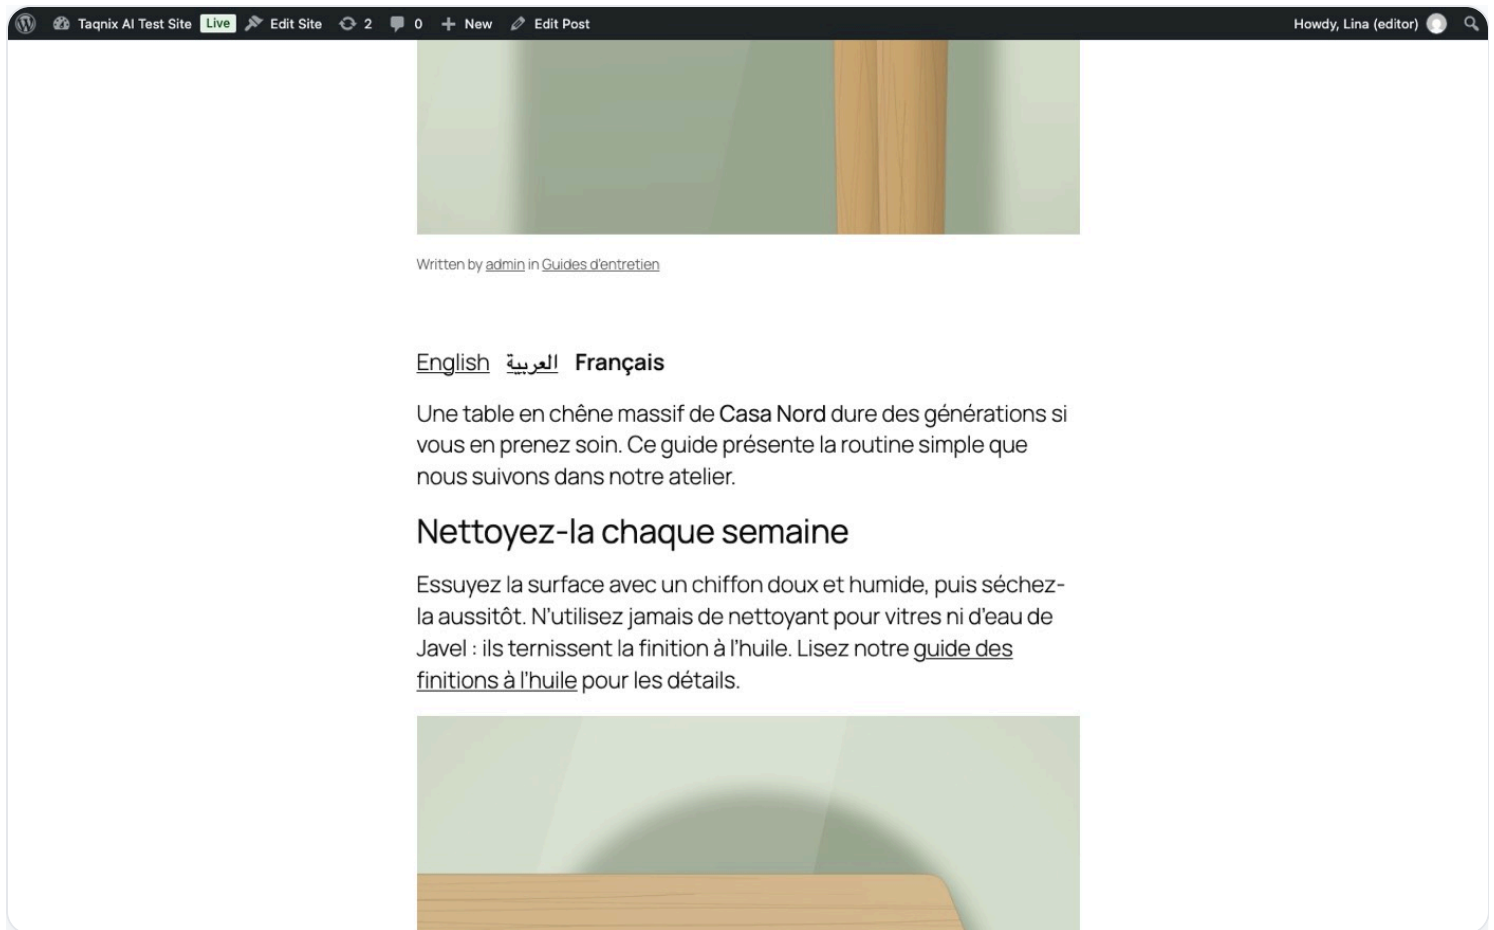

12. WooCommerce products

In plain words: A product is copied with the duplicate feature of WooCommerce (price, images, gallery, variations, stock settings), then its title, description, short description, SEO fields and custom attributes are translated. The copy is a draft with its own SKU (WooCommerce adds a suffix, for example CN-OST-180-1) and its own stock.

Part	Behaviour
Custom attributes	Names and values translated (switch). Attributes used for variations are kept so the variations keep working.
Global attributes and categories	The translated term is used when you linked one (edit the category, tag or attribute term: a field per language); otherwise the original term, or none (setting).
Images	The same media files; the alt text of the media library item is shared by all languages and is not changed.
Prices and stock	Copied once; later changes are not synchronised.

13. On the site: switcher and hreflang

In plain words: Add the block **Language switcher**, the shortcode `[tqtr_switcher]` (style="inline" or "list", current="0" to hide the current language) or the widget **Translations of this page**. It links only the **published** translations of the page shown. In the page head the plugin prints hreflang alternate links for the published members of the group, with x-default pointing to the original (both switches in the settings), and sets the lang attribute of a translated page.

The switcher on a French translation.

```
<head> of http://localhost:8888/wpai/how-to-care-for-a-solid-oak-dining-table/ · alternate links printed by AI Post and Product Translator

<link rel="alternate" hreflang="en" href="http://localhost:8888/wpai/how-to-care-for-a-solid-oak-dining-table/">
<link rel="alternate" hreflang="ar" href="http://localhost:8888/wpai/kyf-tatny-btawla-taam-mn-khshb-ablwt-alslb/">
<link rel="alternate" hreflang="fr" href="http://localhost:8888/wpai/comment-entretenir-une-table-a-manger-en-chene-massif/">
<link rel="alternate" hreflang="x-default" href="http://localhost:8888/wpai/how-to-care-for-a-solid-oak-dining-table/">
```

The alternate links in the head of the original.

Tip: Translations are normal posts with their own addresses: there is no /ar/ or /fr/ prefix in the URL and menus are not translated. Use the switcher block in your template or add the translated pages to a menu.

14. With WPML or Polylang

In plain words: When WPML or Polylang is active the plugin says so and, by default, works in **copy-out mode**: it translates for review, shows the result side by side with Copy buttons and a JSON download, and creates no post. In the settings you can choose the **API mode**: the draft is created and registered as a translation through their documented interfaces (Polylang: `pll_set_post_language` and `pll_save_post_translations`; WPML: the `wpml_element_language_details` filter and the `wpml_set_element_language_details` action). In both modes this plugin prints no switcher and no hreflang links, and it never writes into their tables.

Important: We checked these interfaces in the WPML and Polylang documentation on 30 October 2026 and our tests call them through stand-ins. We did not run WPML or Polylang themselves. With Polylang, use the same language codes on the Languages page.

15. The settings

In plain words: Settings → AI Translator.

0.15

In US dollars per million tokens, from the price list of your provider. Only used for the estimate before a bulk run.

Price of output tokens

0.60

Save Changes

The settings tab.

Option	Meaning
Language of the original content	The language of your posts (a post can have its own).
Content types	Posts, pages, products and other public types.
What is translated	SEO fields, image alt texts, other attributes, product attributes, product codes kept.
Categories and tags	Use linked translated terms, otherwise the original; or translated terms only.
On the site	Alternate links, x-default, page language.
When WPML or Polylang is active	Copy-out only, or the API mode.
Text per request	Characters per AI request; long posts are sent in several.
Longest item	Items with more text are refused.
Largest bulk run	Translations one bulk run may create.
Who can start bulk runs	Editors and administrators, or administrators only.
Prices of tokens	Only used for the estimate.

16. Keep the cost low

In plain words: The text of an item is sent once per language, in requests of at most "Text per request" characters, plus a short instruction. The answer is about as long as the text (longer in

tokens for Arabic and other non-Latin scripts). The estimate before a bulk run uses these numbers and the prices you enter.

Tip	Why
Try one item first	Check the style and the glossary before a bulk run.
Use a mid-size model	Very small models break placeholders more often; a refused answer costs a request.
Keep the daily limit	The run pauses by itself and continues when you resume it.
Translate the outdated ones only	Items with an up-to-date translation are skipped.

17. Privacy

In plain words: Using an AI model means sending text to your provider. For each item and language: the text pieces of its title, content, excerpt, SEO fields and custom product attributes, with placeholders instead of links, shortcodes, code, e-mail addresses, phone numbers, the SKU and the words of your do-not-translate list (those never leave your site). Drafts and private items are sent only when someone translates them. E-mail addresses, phone numbers and card-like numbers are masked first (an option, on by default). Nothing is sent to Taqnix. Mention your AI provider in your privacy policy: the plugin adds a suggested paragraph in **Settings → Privacy**.

Important: AI can be wrong. Treat what it writes as a draft and read it before you publish it.

18. Who can do what

Who	Can
Administrators	Settings, AI connection, languages and glossary.
Editors and administrators (setting)	Bulk runs.
A user who may edit the original and create items of its type	Translate it, translate again, review.
A user who may publish the translation	Apply a waiting update to a published translation.
Others	Nothing: every action checks a security token and these permissions.

19. Arabic and right to left

In plain words: Arabic works as a source and as a target. Translations into Arabic use formal Modern Standard Arabic by default (change it per language), the review shows Arabic right to left, dir attributes in your content are never changed, and the transliterated slug keeps addresses in Latin letters.

مرحبًا، Lina (editor)

كيف نعتني بطاولة طعام من خشب البلوط الصلب	How to Care for a Solid Oak Dining Table
تدوم طاولة البلوط الصلب من Casa Nord لأجيال حين نعتني بها جيدًا. يعرض هذا الدليل الروتين البسيط الذي نتبعه في ورشتنا.	A solid oak table from Casa Nord lasts for generations when you treat it well. This guide shows the simple routine we use in our workshop.
نظفها كل أسبوع امسح السطح بقطعة قماش رطبة وجفّفه فورًا. لا تستخدم أبدًا منظف الزجاج أو المبيض: فهما يُفقدان طبقة الزيت لمعانها. اقرأ دليلنا لطبقات الزيت لمعرفة التفاصيل.	Clean it every week Wipe the surface with a soft, damp cloth and dry it at once. Never use glass cleaner or bleach: they dull the oil finish. Read our guide to oil finishes for the details.
	
ضع قواعد تحت الأكواب والقدور الساخنة. أبعد الطاولة عن أشعة الشمس المباشرة وعن أجهزة التدفئة. ادهنها بالزيت مرتين في السنة بطقم العناية CN-200.	Use coasters under hot cups and pots. Keep the table out of direct sunlight and away from radiators. Oil it twice a year with the CN-200 care kit.
تسوّق طقم العناية	Shop the care kit
روتين أسبوعي بسيط يحافظ على جمال طاولة البلوط الصلب لعقود.	A simple weekly routine that keeps a solid oak table beautiful for decades.
العناية بطاولة البلوط: روتين أسبوعي بسيط Casa Nord	Oak Table Care: A Simple Weekly Routine Casa Nord
نظّف طاولة طعام البلوط الصلب واحمها وادهنها بالزيت كما نفعل في ورشتنا. توصيل مجاني لطقم العناية CN-200.	Clean, protect and oil a solid oak dining table the way our workshop does. Free delivery on the CN-200 care kit.

كيف تختار السجادة المناسبة لغرفة المعيشة

يجب أن تغطي السجادة ثلثي مساحة الجلوس تقريباً، وأن تستقر عليها الأرجل الأمامية للكنبة.

اختر الصوف للمداخل

يتحمل الصوف الحركة اليومية ويسهل تنظيفه.

An Arabic original in the block editor.

20. Limits

Limit	Detail
Accuracy	The AI can be wrong, miss nuance or mistranslate product facts. Every translation is a draft so that a person reads it.
Not a full multilingual system	No language prefixes in URLs, no translated menus, theme strings or widgets, no automatic language redirect.
Block JSON	Text kept inside block settings (JSON) is not translated.
Media	The alt text of a media library item is shared and not translated; alt texts written inside the content are.
Variations	Variation attributes and their values are not translated.
Sync	Prices, stock and images are copied once, not synchronised.
SEO plugins	Only the SEO title, description, focus keyword and social title/description keys listed in the guide are translated; All in One SEO keeps its data in its own table and is not supported.
WPML and Polylang	Interfaces checked in their documentation, not run on our test site.
Background runs	Use WP-Cron; on a site without visits keep the page open.
Page direction	The lang attribute of a translated page is set, but the page keeps the direction of the site: an Arabic translation on an English site is shown left to right unless your theme handles it.
Long items	One item is translated in one browser request (at most 5 minutes) or one background step. A very long item needs many AI requests and can run past that limit; an item that fails or is refused saves nothing, so its requests are lost. Keep the longest-item limit low (60,000 characters by default).

21. For developers

In plain words: Skip this chapter if you only use the plugin.

```
// Translate one item into one language (a linked draft; nothing is published)
$res = TQTR_Translator::instance()->translate( $post_id, 'ar' ); // array( id, status )

// Find the translations of an item
$all = TQTR_Links::members( $post_id ); // array( 'en' => 12, 'ar' => 57 )
$ar = TQTR_Links::translation( $post_id, 'ar' ); // 57, or 0
$sold = TQTR_Links::is_outdated( $ar ); // true when the original changed since

// The language switcher in a template
echo TQTR_Frontend::switcher( 0, array( 'style' => 'list' ) ); // or the shortcode [tqt

// Filters
add_filter( 'tqtr_post_types', function ( $types ) { $types[] = 'event'; return $types; }
add_filter( 'tqtr_fields', function ( $fields, $post ) {
    $fields['meta:_subtitle'] = array( 'value' => get_post_meta( $post->ID, '_subtitl
    return $fields;
}, 10, 2 );
add_filter( 'tqtr_system_prompt', function ( $prompt, $from, $to ) { return $prompt . "\n
add_filter( 'tqtr_copy_meta_keys', function ( $keys ) { $keys[] = '_my_layout'; return $k

// The key can live in wp-config.php
define( 'TQTR_AI_KEY', 'sk-...' );
```

22. Troubleshooting

Problem	What to do
The AI answer was refused	The model broke the placeholders or added markup. Try again, use a stronger model, or split very long paragraphs.
The AI service answered 401	The key is wrong or has no access to the model.
The daily limit is reached	Raise it in the AI connection tab or wait until tomorrow; a bulk run resumes where it stopped.
This item has more characters than the limit	Raise "Longest item" in the settings.
The switcher does not show	Only published translations are linked, and only when WPML or Polylang is not active.
The category is the original one	Link the category to its translation on the edit screen of the category.
The bulk run does not move	WP-Cron runs on visits: keep the page open or call wp-cron.php from a real cron job.

23. Updating and removing

Install the new zip over the old one in **Plugins → Add New Plugin → Upload Plugin** (WordPress offers to replace the current version), or replace the folder `ai-post-and-product-translator` by FTP. Your settings, languages, glossary and the links between translations are kept. To remove the plugin, deactivate and delete it: its settings are removed with it.

Deleting the plugin removes its settings, languages, glossary, the bulk job and the links between translations (post and term meta). The translated posts stay as normal posts.

24. Support

Installation help and bug fixes are included for 6 months, with lifetime updates. Contact us through the marketplace page where you bought the plugin or write to **support@taqnix.com** with your WordPress version, the plugin version and a screenshot.

Changelog

1.0.0 – Initial release

- Translation of posts, pages and WooCommerce products into linked drafts with AI (OpenAI-compatible or Anthropic)
- Block-aware segmentation with placeholder protection, glossary, do-not-translate list and validation that refuses broken results
- Outdated detection, translate again, waiting updates for published translations, side-by-side review
- Bulk translation with a cost estimate, background run, pause, resume and cancel; daily limit
- Language switcher block, shortcode and widget; hreflang alternate links; lang attribute
- Per-language formality, tone and slug policy; WPML and Polylang detection with copy-out or API mode; Arabic translation
